

## Conference 27<sup>th</sup> Sept 2018 in Haining

The 2018 Haining International Innovation and Entrepreneurship Conference will be held by China Association for Science and Technology, as an important activity of the China Mass Entrepreneurship and Innovation Week.

There will be a round-table conference and 5 roadshows about advanced material and intelligent manufacturing.

We'd like to invite entrepreneurs, scholars and investors in the industries to attend the activity.

It will be held in Haining, Zhejiang, China on 27 Sept. 2018.

As the largest non-governmental organization of scientific and technological professionals in China, the China Association for Science and Technology (CAST) serves as a bridge that links the Communist Party of China and the Chinese government to the country's science and technology community. Through its 210 national member societies and local branches all over the country, CAST maintains close ties with millions of Chinese scientists, engineers and other professionals working in the fields of science and technology. The history of CAST can trace back to the eve of the founding of the People's Republic of China in 1949 when a number of the nation's primary scientific and technological organizations gathered at a meeting to call upon the country's science and technology community to dedicate all their efforts to the building of New China. The meeting led to the birth in 1950 of two new national organizations --the All-China Federation of Natural Science Societies and the All-China Association for Science Popularization. In September 1958, the two organizations decided at their joint congress to merge into a unified single organization -- the China Association for Science and Technology.

Since its inauguration, CAST has made significant contributions to the prosperity and development of science and technology, to the popularization of science and technology among the public, to the emerging of large numbers of professional talents, and to the overall economic and social development in China.

As the bridge linking Chinese science and technology community with the Communist Party of China and the Chinese government, CAST is a constituent member of the country's top political advisory body -- the Chinese People's Political Consultative Conference (CPPCC), where it joins all the political parties and other social groups in the state affairs through political consultation, policy-making and democratic supervision.

Nordic companies are invited to participate in the conference. It will be possible to get the transportation and accommodation cost payed by the organizer of the conference.
